Summary

Full-stack developer with strong expertise in the MERN stack, scalable systems, applied experience in AI/ML projects. Delivered impactful projects including an AI-powered online judge, a GenAI summarizer, and a hybrid CNN for cancer detection, presented at ICCCNT 2025. Skilled in C++, React, Node.js, Docker with a 9.22 CGPA and proven problem-solving ability.

Education

SRM Institute of Science and Technology

Sept 2022 – May 2026

B Tech , Computer Science Engineering

- CGPA: 9.22/10.0
- **Coursework:** Data Structures and Algorithms, DBMS, Object-Oriented Programming.

Skills

Programming Languages: C++, SQL, JavaScript

Web & Backend: ReactJS, NodeJS, Express, MongoDB, TailwindCSS, REST APIs.

AI/ML & Data: TensorFlow, Keras, Pandas, NumPy, Matplotlib, Seaborn, Jupyter.

Devops & Tools: Git, GitHub, Docker, GitHub Actions (CI/CD), Postman, Agile.

Projects

CompileAI

[Live Link](#) 

- Developed a full-stack MERN online judge platform with AI-powered hints to guide users in solving coding problems more efficiently.
- Implemented role-based authentication and protected routes for secure admin and user access.
- Built an in-browser C++ compiler with real-time execution, test-case validation, and submission tracking.
- Dockerized the application with Docker Compose for scalable deployment and easier environment setup.
- Designed interactive dashboards for both admins (problem management) and users (coding interface)

Renal Cancer Detection

Jan 2025 - Mar 2025

- Developed a hybrid CNN model (ResNet50 + Xception) leveraging transfer learning for faster convergence and improved feature extraction.
- Processed **10,000** medical images from Kaggle datasets, improving diagnostic accuracy to 98%
- Accelerated training and reduced error rates by integrating optimized preprocessing and model fine-tuning.
- Tools Used: TensorFlow, **ResNet50**, **Xception**, Kaggle Datasets

Sums – AI Article Summarizer

[github](#) 

- Built a **GenAI-powered tool** to tackle information overload by summarizing lengthy online articles using OpenAI's GPT API
- Compressed long-form articles (5,000+ words) into 20% of original length while preserving factual accuracy.
- Enhanced content consumption efficiency, enabling users to grasp essential insights in less time.
- Tools Used: React.js, RapidAPI, TailwindCSS

Conference & Presentation

"A Deep Learning Approach to Renal Cancer Diagnosis: Improving Accuracy in Medical Imaging"
Accepted for presentation at the **16th International Conference on Computing, Communication and Networking Technologies (ICCCNT 2025)**, July 6, 2025 (Online)

Status: Presented, ([certificate](#))
